Chemical Abstracts / Mineralogical Abstracts / Crystallography Abstracts

Stop using all synthetic fertilizers, toxic pesticides and other chemicals that harm living organisms. Ph-nitrogen products are bad and nitrogen-only products are the worse.

of soil health with aeration and natural organic
and amendments.

...tive plants and well-adapted introductions.
...refully and make wise decisions.

TING - Apply compost, rock materials
or sand, granite, basalt or other
materials and dry molasses to all
Use products that introduce and/or
soil microbes in the soil.

roadcast organic fertilizer to the soil every year at 20 lbs. per 1,000 sq. ft. during the growing season, at least one compost tea or Garrett's Soil Salt fertilizers and products containing synthetic materials must be eliminated from the garden. Synthetic materials must be avoided on food crops. Water-soluble crystal-type fertilizers are not acceptable in an

MULCHING - Mulch bare soil around all shrubs, trees, ground covers and food crops with shredded leaves, straw or hay. In protected beds with shredded wood chips or straw, mulching will protect plants from drought, wind and rain, inhibit weed germination, decrease watering needs, moderate soil temperatures. Other natural mulches can be used, but avoid bark-moss granules that may become herbicide residue. Also avoid pine bark, cypress mulch and chemically dyed wood products. Do not pile mulch on the stems of plants.

WATERING - Water

WATERING. Water only as needed. The organic program will reduce the frequency and volume of water needed. Add a tablespoon of apple cider vinegar per gallon of water when watering spots. Use 1 ounce of liquid kelpate in acid spots. Garrett Juice can be used in either case. Be careful of root rot systems because with those systems, it is difficult to avoid dry and water-logged pots. Watering from above as nature does is usually best.

MOWING - Mow turf as needed and mulch clippings into the lawn to return nutrients and organic matter to the soil. Put occasional excess clippings in the compost pile. Don't ever let clippings leave the lawn. Do not use line trimmers around shrubs and trees. Buffalo grass lawns need less care.

WEEDING - Hand pull large weeds and work on soil health for overall control. Mutch bare soil in beds. Avoid all synthetic herbicides including Roundup, 2, 4-D, MSMA, pre-emergents, broad-leaf treatments, soil sterilants and especially the SU (sulfonylurea) herbicides such as Manage and Quil. Spray noxious weeds as needed with vinegar-based or fatty acid herbicides.

PRUNING - Do not "top" or "gut" trees. Remove dead, diseased and conflicting limbs. Do not over prune. Do not make flush cuts. Leave the branch collars intact.

CONTROLLING INSECT PESTS - In general, control insect pests by encouraging beneficial insects and microbes and spraying with compost tea or the Garret Juice Plus mixture. Spray minor outbreaks with plant oil products including orange oil, garlic pepper tea, and essential oils. Avoid all pyrethrum products, especially those containing Pteronol butoxide (PBO), petroleum distillates and other contaminants.

CONTROLLING DISEASES - Most diseases such as black spot, brown patch, powdery mildew and other fungal problems are controlled by prevention and other cultural improvements, and avoidance of high nitrogen fertilizers and proper watering. Outbreaks can be stopped with sprays of potassium bicarbonate, commercial juice, diluted milk or the commercial product Plant Wash.

The logo is a circular emblem with a textured, organic appearance. It features a dense, swirling pattern of green and yellow-green colors, resembling a microscopic view of a cell or a natural, organic growth. The text "Organic Club of America" is centered horizontally across the middle of the circle in a bold, black, serif font.
